EVO QU

UUA

Following the ancestral path that leads to modernization and continuous updating of an ancestral ritual such as honoring the memory of our loved ones, **Evoquia** has not only led a considerable advance, but has contributed to the renewal of the criteria of funerary elements, with the creation of **artistic columbariums from our own design.**

Cyprus

Structures that **evocate the figure of cypresses** that can hold between four and forty urns each one depending on the model.

Stela

Structures with capacity for between one and eighty urns. It's **modular design** in straight and arc form allow for elegant combinations that **adapt to the characteristics of different terrains.**

Columbariums

The columbariums of **stainless steel 8mm thick**, remain sheltered in the spaces created by the vertical and horizontal walls of the **Cyprus** and **Stela's** structures. Each **columbarium** has a sliding drawers that allow **the door to be opened from the front**.

The covers are made of **stainless steel** and covered in **thermoformed glass**, that decorates and characterises the piece.

In each one of the urns there is a **frontal plaque made of brass** that has the double function of **holding flowers and serving as handle to the door**, with the removable front piece to allow the registration of names.

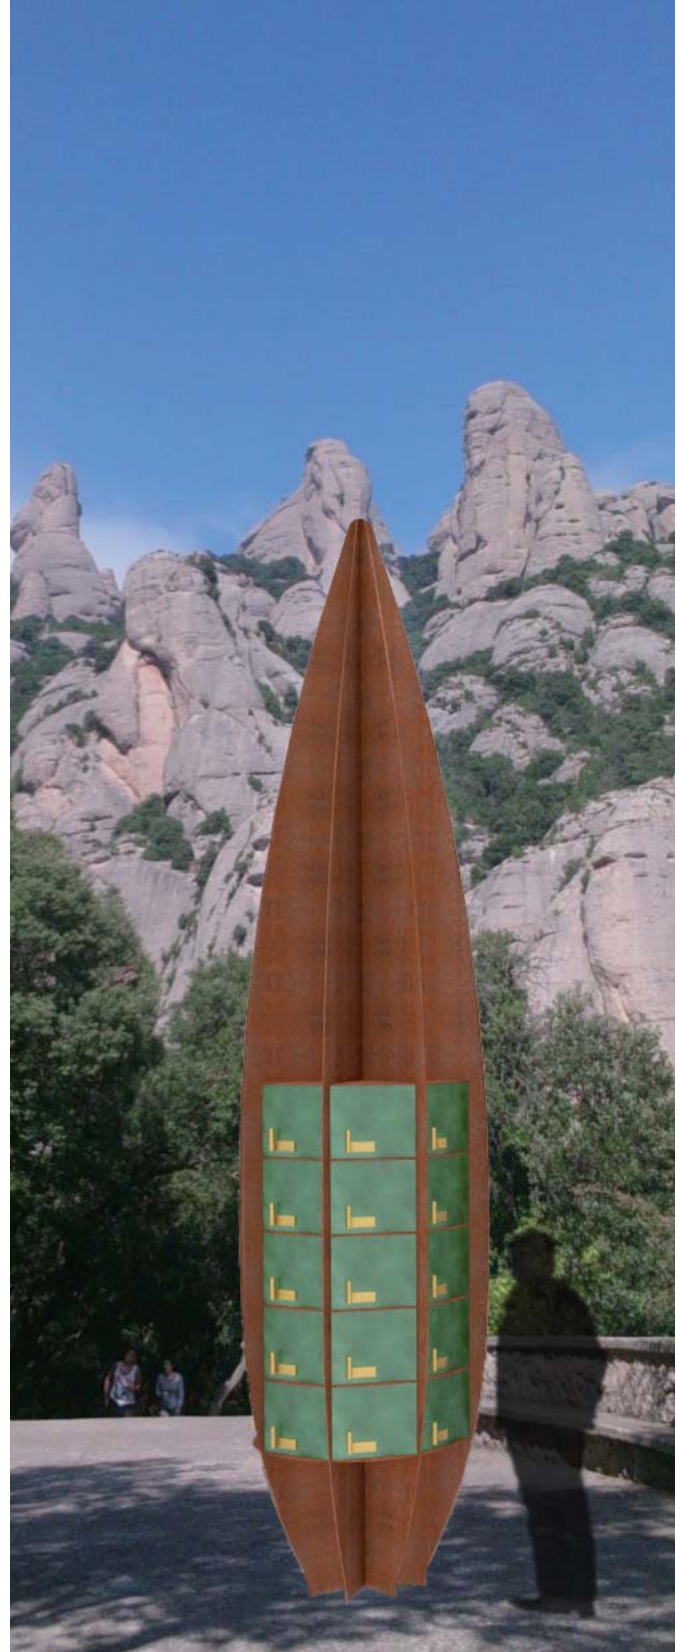

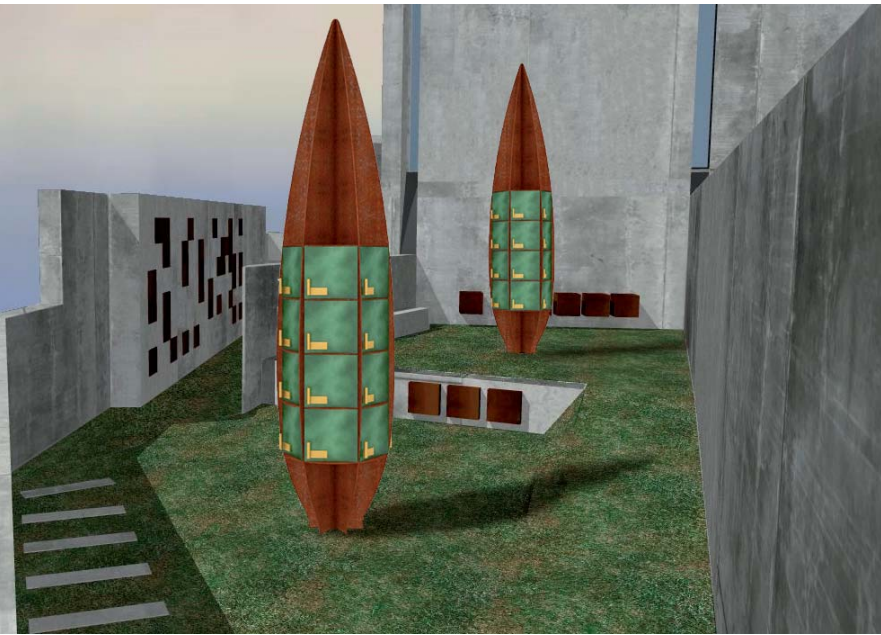

Cyprus

The different sizes of **Cyprus** and the isolated pieces design characteristic allows for **different combinations that are better adapted to the place in which they are installed**. In these images, an accommodation in the cemetery of Montjuïc, Barcelona.

Stela

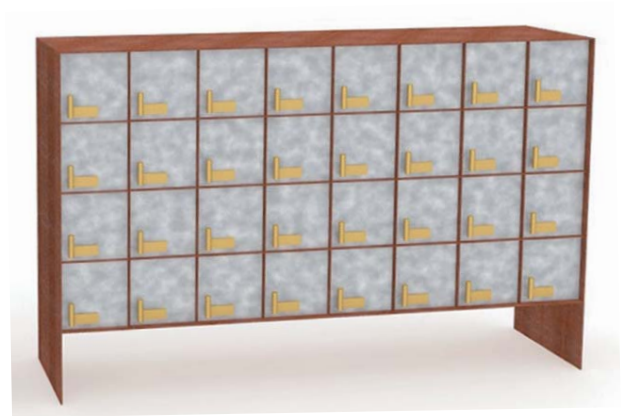

The structure, made of **stainless steel**, is **8mm thick**, straight or arched. Its **modular design** allows for the design of a wide variety of combinations in relation to the characteristics of the space.

Stela for walls

Cyprus and Stela

When **Cyprus** and **Stela** are combined between them the result is especially attractive.
